

# FSD Africa's Nature Programme Takes a Systems-Level Approach to Scaling Nature Finance Across the Continent

Our work encompasses four key pillars

Supporting enabling conditions

Driving investment

## Policy

**Support the development of enabling policy environments** for nature finance by collaborating with African policymakers, financial sector regulators, and central banks

## Capacity Building

**Strengthening African financial leadership in nature finance** through targeted capacity building and advisory support for both institutions and senior-level individuals

## Data & Metrics

**Enhance access to nature-related data, metrics, and impact monitoring** to support more informed and effective investment decisions

## Pipeline Generation

**Strengthen nature-positive investment pipelines** through acceleration, blended finance, de-risking strategies, and innovative financing mechanisms

Through this systems-level approach, we aim to reduce nature-negative financial flows while scaling nature-positive finance - **transforming nature from an overlooked externality into a valued, investible, and protected asset**
